

20/08/23  
Expt: 13

Aim: To create a storage service using Microsoft Azure and demonstrate it by using a static web page source.

- procedures:
- Create a storage account in Microsoft Azure portal.
  - Give a valid user name and select region.
  - Select static webpage and give index.html and 404.html.
  - Check the primary URL and verify whether the static web page is accessible from Internet as a public service.

Result:

A static web page has been stored as a blob in the storage service of Azure and accessed it using the primary URL as a public service.

Output:

URL : https://134.216.78.99/bbb.com
