

12/08/23

Exp No: 12

Aim: To create a web application using Microsoft Azure display and publish it on the internet access via URL of the application.

procedure:

- Launch the App Service in Microsoft Portal Azure.
- Give a valid web app name.
- Select code and select either Java or .NET as runtime stack.
- Select the preferred web server stack.
- Select the preferred OS.
- Select the Region for deploying the app.
- Review and create
- Deploy it on the given URL.
- Use the URL of the web app and check to see if it is working.

Result:

A simple cloud application has been created using Java on tomcat web server and deployed. It has been tested using the URL.
